

# Glulam study tour, Norway 2010

## **Nor-Build Timber Fabrication and Fine Carpentry Ltd.**

Sven Skatun

A Story in Pictures of Glulam related Products from our Portfolio

# Janus Chairs

Ryder

Painted on the underside of the top of the petals, 3 red spherical forms provide shelter and rest.

The folded plate structure can be related to the desired position – based on a form that is only for out, only for the way it loads or reacts to form a better group.

How is used? They are the closed end of a flower, curled outward. They are not to be used.

On approach, and when seen from other directions around the wheel, they are one structure – that of them to be used and out, providing a constantly changing composition dependent upon the relative positioning.

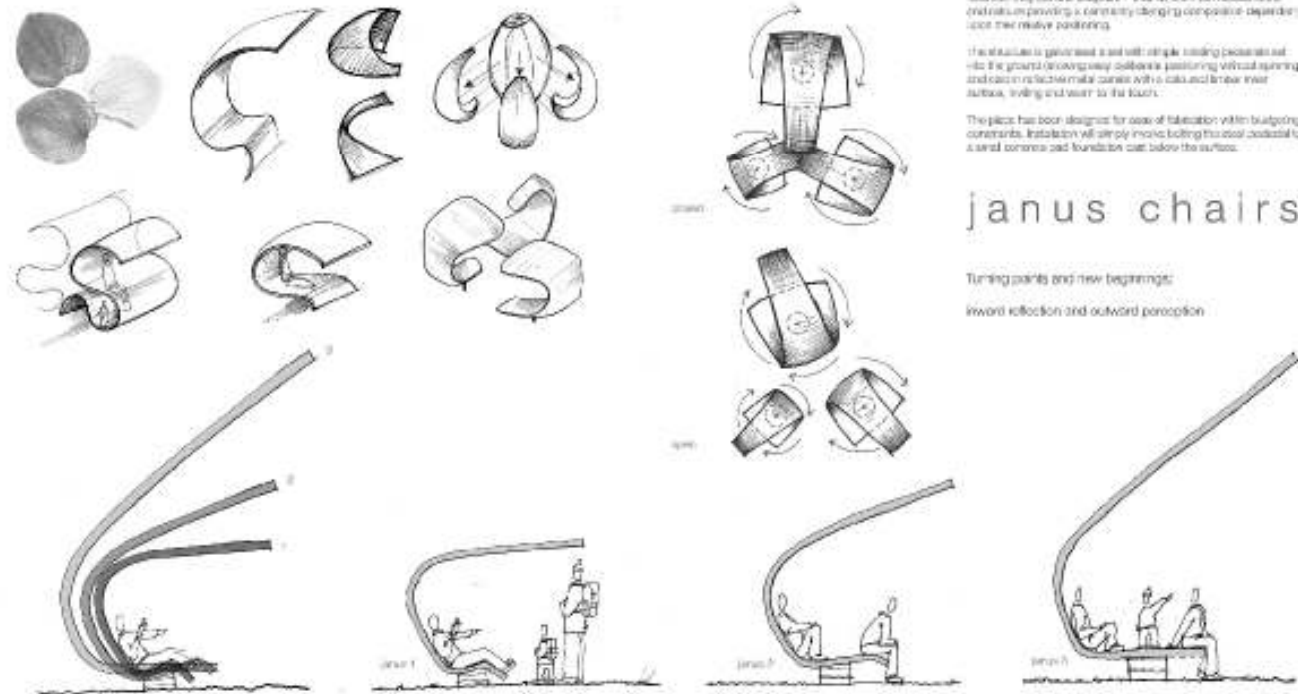

If the structure is given a seat with simple loading positions set into the ground, allowing easy following positioning without spinning, and each in reflective mirror panels with a cast and linear rear surface, folding and over to the back.

The piece has been designed for ease of fabrication within budgeting constraints. Installation will simply involve bolting the steel structural to a steel concrete pad foundation cast below the surface.

janus chairs

Turning points and new beginnings:

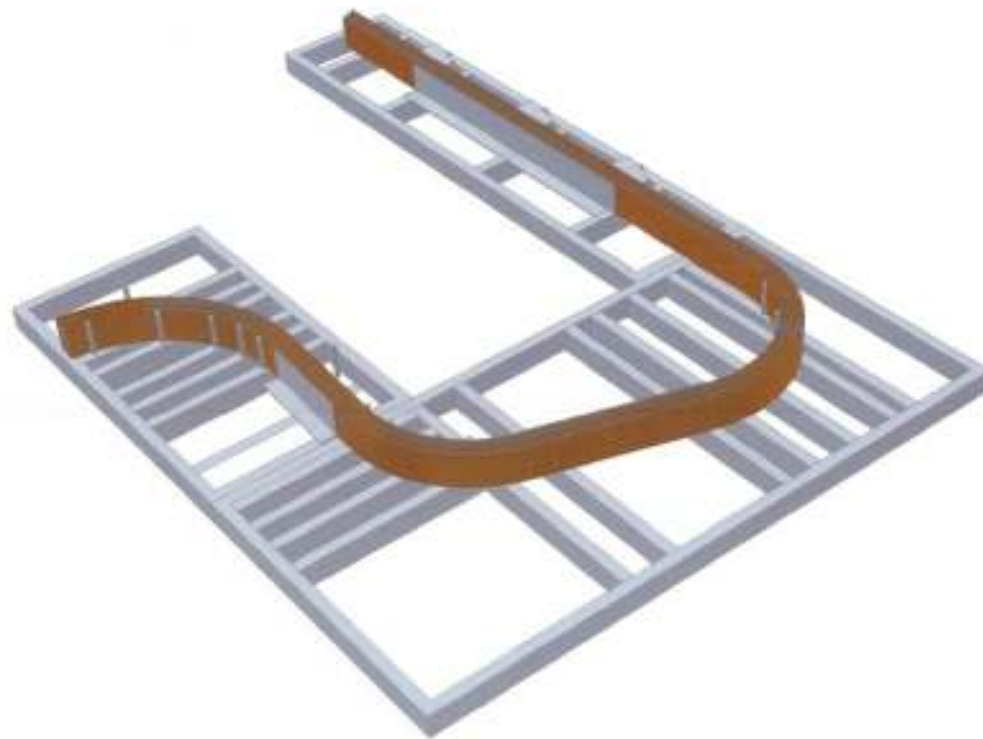

inward reflection and outward perception
